

Wireless for Connection Vouchers

Using Wireless PTP/PMP for Connection Vouchers

Wireless (fixed wireless access or wireless broadband) has reached a stage where it is increasingly becoming the most adopted standard of Superfast Wireless Broadband and Connections for the UK Government's Connection Vouchers scheme. The reasons behind the growing use of wireless for Connection Vouchers is due to a unique combination of fibre-like speeds, simplicity of deployment, reliability and price.

Commercial Benefits, Speeds and Distances

In comparison to leased line, wireless is effortless and quick to install and extremely cost effective whilst benefitting from wire-like speeds and reliability. Wireless PTP operates primarily from 5.4, 5.8, 10 - 38, 60, 70 & 80GHz, can reach distances up to 50km and speeds of 2Gbps depending on the frequency. Wireless PMP operates primarily in 5.4 or 5.8GHz, can reach distances up to 5km and speeds of 500Mbps per access point ring.
