

NOMADIXCASTING

The Fastest Casting Solution in the Industry

Guests want to cast their own content from their devices to the TV in the room and expect a simple, secure experience like they have at home. Existing casting solutions are often difficult for guests to use and a burden for hotels to deploy and maintain because guests are required to remember usernames and passwords and enter login information using the TV remote.

Nomadix Casting allows your guests to easily and securely stream their preferred media content from their mobile devices onto the in-room TV, just like they do at home. The best part—when used in tandem with a Nomadix gateway, guest devices are connected automatically to the in-room TV.

HOW IT WORKS

If a guest is staying in one of the millions of rooms at properties that use Nomadix Gateways to authenticate and manage their Wi-Fi network, guest devices are paired with their TV the instant they connect to the hotel Wi-Fi. That is it! No logins, no steps, just what they want to watch, when they want to watch it.

For properties where a Nomadix gateway isn't installed, Nomadix Casting displays a QR code on the TV screen so guests can simply aim their camera at the QR code to connect their mobile device. All the guest has to do after that is choose what they want to watch and select the casting button in the app of their content provider. It's that simple.

FEATURES & BENEFITS

-  Automatic pairing of guest devices at properties with the Nomadix Gateway
-  Simplified authentication using an on-screen QR code for properties without a Nomadix Gateway
-  Contactless experience as guests use their own devices and avoid the remote
-  Built-in reliability and security
-  Support for guest content from over 2000 apps, including Netflix, Hulu, YouTube, Spotify
-  Ability to use mobile device while casting
-  Support for both iOS and Android
-  Customizable with hotel branding
-  Easy-to-use, web-based management platform
